TECHNICAL SKILLS

Languages:

- **Experience:** C/C++, JavaScript, HTML, CSS
- **Proficient:** PHP, C#, Python, SQL

Technologies & Tools: Unity, Git, MySQL, Arduino

EDUCATION

Universidad Politécnica Taiwán Paraguay (UPTP)

March 2023 - Present

Bachelor in Computer Science and Information Engineering

Exchange Program: National Taiwan University of Science and Technology (NTUST)

February 2025 - Present

Relevant Coursework (NTUST & UPTP): Object Oriented Programming, Data Structures and Algorithms, Databases, Computer Graphics

PROJECT WORK

3D Basic Roll a Ball Game (Unity):

- Built a physics-driven 3D game in Unity using C# from scratch.
- Developed procedural level generation, dynamic difficulty multipliers, and a persistent scoring system.
- Implemented automated object cleanup and asset-reusing "infinite" ground logic.
- Deployed the project to Itch.io for WebGL and Windows.

BlackJack Game (JavaScript)

- Developed the integration layer between core game algorithms and user interface.
- Engineered a responsive interface using JavaScript event Listeners to trigger the back-end mechanics.

Real-Time Chat Application (MongoDB, PHP, WebSockets)

- Developed secure user registration, multi-room logic, and a file upload/sharing system with front-end and back-end.
- Integrated a relational component (SQL) for user authentication and initial setup.

Academic Portal (C++)

- Implemented efficient data handling for university schedules and grade tracking, focusing on search/sort algorithms and structured data validation.
- Designed a multi-form interactive interface using the FMX Framework, ensuring a modular transition between login, registration, and management submenus.
